From your course guide (libguides.uky.edu/BIO155) click on the Web of Science™ Core Collection. Before you do anything else, you will need to Register. In the top right corner is a list of tabs. Click on Sign In and then Register from the drop down menu.

A Sign In window will pop up. If you’ve already created a Web of Science account, log in with your email and password. Otherwise, click on the Register button.

Register with an email you can access, because a code will be sent to it for verification.
Registration involves minimum information (your email, first name and last name) and some information on the purposes for which you’ll be using Web of Science.

- Refer to the Password Guidelines on how to setup your appropriate password, then retype that same password into Retype New Password.
- For Primary Role, select the role that best suits you. This will probably be Undergraduate Student.
- The form also requests the Subject Area you’ll be researching. This will not filter out other searches and bibliographic styles. Pick whichever one fits your major or course of study, such as Physical Sciences.
- Since we are signing up for Endnote™ basic, we need to select our Bibliographic Software Used as Endnote.
- The Opt In/Opt Out requires a selection, but it is your preference on whether or not you want to receive training materials and announcements via your email.
- For the Automatic Sign In question, remember that Web of Science™ and Endnote™ will use cookies to remember your account information to sign in automatically, and you might want to decline this feature on a public computer.

Once you agree to the terms & conditions and have filled out the required information fields, click on the tab EndNote in the top toolbar.

You will be prompted to complete registration to use EndNote by clicking I Agree. You can now begin using Endnote™ basic.
